

Energy Policy

At Plessey, the aim of our energy policy revolves around fostering ingenuity, through conscientious and effective energy management.

Plessey commits to:

- Comply with all relevant regulatory and other requirements applicable to the business and the energy management system.
- Embrace sustainable innovation and responsible energy management.
- Engage and educate employees on sustainable practices.
- Continually monitor and analyse energy consumption to minimise waste.
- Incorporate sustainable design principles in facility expansion.
- Collaborate with suppliers for the procurement of energy-efficient products.
- Continually review and improve the performance of the energy management system by implementing energy efficient technologies and practices and setting objectives and energy targets.

Ensure these aims are achieved through the use of appropriate procedures, information and resource, that will be systematically monitored, audited, reviewed and improved.
